

Windows Setup Guide

1. Install Git

Go to:

- <https://git-scm.com/download/win>

Download and install Git for Windows.

After install, open PowerShell and run:

```
git --version
```

If it prints a version number, Git is installed.

2. Install Node.js

Go to:

- <https://nodejs.org>

Download the LTS Windows Installer (.msi) and install it.

After install, open PowerShell and run:

```
node -v
```

```
npm -v
```

If both print version numbers, Node is installed.

3. Install Expo Go on the phone

On the phone, install:

- Expo Go

That is how you will open the mobile app.

4. Download the project

Open PowerShell and run:

```
cd $HOME
git clone https://github.com/ninanguyen26/clinicals.git
cd clinicals
```

5. Install project dependencies

Run:

```
cd $HOME\clinicals

cd backend
npm install
npx prisma generate
npx prisma db push
cd ..
cd mobile
npm install
```

This installs:

- backend packages
 - Prisma client
 - Expo/mobile packages
-

6. Create the backend env file

Make sure you generate your own Navigator API Key from UF Navigator Toolkit and paste it below.

In PowerShell:

```
Copy-Item backend\.env.example backend\.env
notepad backend\.env
```

Put this in `backend\.env`:

```
NAVIGATOR_API_KEY=PASTE_UF_NAVIGATOR_KEY_HERE
NAVIGATOR_BASE=https://api.ai.it.ufl.edu
NAVIGATOR_MODEL=granite-3.3-8b-instruct
PORT=3001
DATABASE_URL=postgresql://neondb_owner:npg_FGRgvqYyd7Q2@ep-broad-boat
-ai3jrd0b-pooler.c-4.us-east-1.aws.neon.tech/neondb?sslmode=require
NAVIGATOR_IMAGE_MODEL=flux.1-schnell
NAVIGATOR_TTS_MODEL=kokoro
NAVIGATOR_TTS_VOICE=af_heart
NAVIGATOR_TTS_SPEED=1
NAVIGATOR_TTS_TIMEOUT_MS=60000
```

```
NAVIGATOR_STT_MODEL=whisper-large-v3
RESEND_API_KEY=re_4k6Vrv8C_8sinDfhwWMFLaa82JRsgR2oA
EMAIL_HOST=smtp.gmail.com
EMAIL_PORT=587
EMAIL_USER=theclinicalsimai@gmail.com
EMAIL_PASS=yebv cgzz mxqk yaei
EMAIL_FROM=Clinicals <theclinicalsimai@gmail.com>
```

Save and close Notepad.

7. Create the mobile env file

Make sure you use your Windows laptop IP address and paste it in below in the `mobile\.env` area in `YOUR_WINDOWS_IP`.

In PowerShell:

```
Copy-Item mobile\.env.example mobile\.env
notepad mobile\.env
```

Put this in `mobile\.env`:

```
EXPO_PUBLIC_API_BASE_URL=http://YOUR_WINDOWS_IP:3001
EXPO_PUBLIC_CLERK_PUBLISHABLE_KEY=pk_test_dG91Y2hlZC1hbnQtOTEuY2xlcmsuYWNjb3VudHMuzGV2JA
```

Save and close Notepad.

Important:

- do not use `localhost` if the app is opening on a real phone
 - use the Windows laptop's Wi-Fi IP address
-

8. Find the Windows laptop IP address

In PowerShell:

```
ipconfig
```

Look for the active Wi-Fi adapter and find:

- IPv4 Address

Example:

- 192.168.1.45

Then `mobile\.env` should be:

```
EXPO_PUBLIC_API_BASE_URL=http://192.168.1.45:3001
```

9. Start the backend

```
node src/index.js
```

Open PowerShell window 1:

```
cd $HOME\clinicals\backend  
npm run dev
```

If Windows Firewall asks for permission:

- allow access on private networks

That matters because the phone needs to reach port 3001.

10. Start the mobile app

Open PowerShell window 2:

```
cd $HOME\clinicals\mobile  
npx expo start -c
```

This starts Expo and shows a QR code.

11. Open the app on the phone

On the phone:

1. Open `Expo Go`
2. Scan the QR code

The app should open.

Quick Test Checklist

Once the app opens:

1. Sign in

2. Open the UTI case
 3. Send one typed message
 4. Confirm patient reply appears
 5. Confirm patient voice plays
 6. Try microphone input
 7. Finish interview and submit HPI
 8. Confirm results screen loads
 9. Confirm points show on the cases screen
 10. Confirm previous attempts opens
-

Common Windows Problems

Phone cannot reach backend

Check:

- laptop and phone are on the same Wi-Fi
- backend is running
- Windows Firewall allowed Node
- `EXPO_PUBLIC_API_BASE_URL` uses the laptop IP, not `localhost`

Then restart Expo:

```
cd $HOME\clinicals\mobile
npx expo start -c
```

Auth fails

Usually:

- **wrong** `EXPO_PUBLIC_CLERK_PUBLISHABLE_KEY`
